

Inflatable Life Rafts-

Spotlight on Inflation Technology

Welded Closed 770g (1.5lbs) CO2

Non Refillable Gas Cylinders Made to DOT39 NRC

All rafts need an inflation system and at some point they'll need to be serviced. Most raft owners will appreciate a sealed disposable CO2 cylinder rather than the refill type which require hydro testing and are very costly to replace. Get the people out of the water. Economical rafts are able to save MORE lives.

There are many 4-6 man rafts out in the field. They too could be serviced as easily as an inflatable PFD.

These disposable 440g and 770g cylinders don't leak, are light weight and are DOT approved.

The life rafts shown are for reference only and do not specifically use or endorse our gas cylinders. We encourage innovative designs that can get people out of the water.

Allison Thorsen
Inventory Control Manager -
Leland

"When i go Tuna fishing 60 miles offshore you can bet that I want my raft to be dependable...that means a CO2 cylinder that doesn't leak."
